

NATURES OWN LUBRICATION & CORROSION PROTECTION

USER GUIDE

Woolube is an invaluable product to the marine industry, its forte being the preserving of exposed base metals. Woolube is particularly useful as an underwater exposed metal coating.

BENEFITS: Resistant to acid etching
Base metal penetration
Pro-active ability
Reduces hydrolysis

TECHNICAL

1. Clean propeller or other fittings back to base metal and wash with a liquid pool chlorine at 3:1 ratio to kill any microscopic spore. (very important)
2. It is preferable to heat the metal to between 65⁰C to 100⁰C.
3. Liberally apply *Woolube Grease* or *Woolube Ozspray* directly onto the hot components and rub in where practical.
4. Continuous use of *Woolube Grease / Ozspray* at regular service intervals can enhance and preserve your valuable assets.
5. As Woolube is a natural product it does not affect our waterways like the traditionally used "Toxic" products. *Woolube Ozspray* will not totally stop bacterial attachments, but drastically reduces this ongoing process.
