

NATURES OWN LUBRICATION & CORROSION PROTECTION

USER GUIDE

TIMBER PRESERVATION

BENEFITS:

- Non-toxic lanolin film
- Penetrates surface and prolongs timber life
- Does not evaporate or leach
- No breakdown with exposure to U. V. Rays
- Highlights the natural timber grain
- Seals timber to prevent moisture loss or gain, thereby protecting against rotting, splitting and drying out
- The anti-corrosive qualities in the oil will protect nails, screws and all metal fittings from rust and corrosion.
- Non-slip when wet
- Easy to apply to all external timbers

APPLICATION: Apply *Woolube Ozspray* evenly coating the surface. Dry patches will need extra attention to achieve an even finish. Best results achieved with lambs wool applicators.

As this is a penetrating liquid and not a surface finish, any excess will remain tacky and must be removed. This is easily accomplished with a terry toweling cloth and requires only light rubbing. Buffing of the surface will provide best finish.

Should additional applications be desired in the future, simply reapply – no special preparation is necessary.
